

DPCellSalaryWeb — User Manual

A guide for day-to-day use of the DPCellSalaryWeb application: logging in, working with master data, running salary entry, DA Difference, increments, the approval workflow, and reports.

1. Getting Started

1.1 Logging In

1. Open the DPCellSalaryWeb login page in your browser.
2. Enter your **Username** and **Password**.
3. Click **Login**.

If your username or password is incorrect, the page shows “Invalid username or password.” Contact your administrator if you’ve forgotten your credentials or your account is locked.

1.2 Changing Your Password

Once logged in, open **Change Password** from the menu (available to every role). Enter your current password and your new password to update it.

1.3 The Home Screen

After logging in you land on the **Dashboard**. The menu on the left/top groups the application into four areas:

Menu Group	What it’s for
Masters	Setup data — institutes, employees, pay structure, allowances, users, roles
Salary	Running salary for a month — entry, approval, returning bills, final bill
DA Difference	Arrears bills when DA rates change mid-year
Reports	Registers, summaries, pay slips and variation reports

What you see in the menu depends on your **role**. See section 2.

2. Roles & What Each Role Can Do

The system recognizes three built-in roles, plus custom roles built from individual permissions.

Admin (Super Admin)

Full access to every screen — all Masters, Salary, DA Difference and Reports — with no restrictions. Only an Admin can manage **User Master** and **Role & Permission Master**.

Account Officer

- Can open **Salary Approval** (the bill approval queue) — this screen is Account-Officer/Admin only, never an Auditor.
- Can view all **Reports**.
- Cannot access Masters, User Master, or Role & Permission Master unless explicitly given custom permissions.

Auditor

- Can access whichever screens their assigned permissions cover (granted through Role & Permission Master), except **User Master** and **Role & Permission Master**, which are always off-limits.
- Uses **Returning Bills** to review bills sent back to them and to return bills that need correction.
- Never sees **Salary Approval** — that queue is Account Officer/Admin only, even if a permission is mistakenly granted.

Custom Roles

An Admin can create additional roles in **Role & Permission Master** and grant a specific set of page permissions (per master, per report, per salary screen). A user with a custom role sees only the pages their permissions cover.

If a page you expect to see is missing from your menu, it's almost always a permissions setting — ask your Admin to check **Role & Permission Master** for your role.

3. Master Data Setup

Set these up before running salary for the first time, and maintain them as things change. All Masters live under the **Masters** menu (Admin, or a role with the matching permission).

Master	Purpose
Section Master	Defines the administrative sections institutes belong to
Institute Master	Institutes (schools/colleges) that employees belong to
Employee Master	Employee records — personal details, institute, section, pay level/cell, increment month
Payroll Configuration	General payroll settings
Designation Master	Job designations
Pay Revision Master	Pay Commission / pay revision definitions
Pay Matrix	The Level × Cell grid of Basic Pay amounts for each Pay Revision
Salary Component Master	The salary components (earnings/deductions) used in calculations
DA Master	Dearness Allowance rate history — DA % by effective date
Increment Master	Increment-related configuration
HRA Master	House Rent Allowance rules
CLA Master	City/Compensatory (CLA)

	allowance rules
Medical Allowance	Medical allowance rules
Transport Allowance	Transport allowance rules
Salary Bill Code Master	The bill codes salary and DA-Difference bills are generated under
User Master	Application user accounts (Admin only)
Role & Permission Master	Roles and their page-level permissions (Admin only)

3.1 A Note on Employee Pay

An employee's Basic Pay comes from the **Pay Matrix** (their Pay Revision + Level + Cell). A yearly increment simply moves the employee to the next Cell in the same Level — you don't need to type in a new Basic Pay by hand. DA, HRA, MA, TA and CLA are then calculated automatically from the masters that are effective on the salary date, and NPS is calculated as 10% of (Basic + DA), rounded up.

3.2 Adding or Editing Records

Every master screen follows the same pattern: 1. Click **Add New** (or select an existing row to edit). 2. Fill in the required fields. 3. Click **Save**.

If you see an error like "already exists" when you're sure the record is new, double-check you're not accidentally re-using an ID that belongs to someone else's record (for example, don't type an existing username into a new-user field) — contact your Admin if the message persists.

4. Running Salary — Salary Entry

Salary Entry is where a monthly salary bill is opened, calculated, saved and submitted for an institute.

4.1 Opening a Bill

1. Go to **Salary → Salary Entry**.
2. Choose the **Institute** and the **Bill / Salary Month**. The screen defaults to the most recent salary month, but you can pick an earlier one from the dropdown.
3. Click **Get Data** to load the employee grid.

Note on "Bill Month" vs "Salary Month": most months these are the same, but for an arrears/back-dated bill they can differ (e.g. Bill Code JUN-2026 carrying Bill Month MAY-2026). If you see this, it reflects how that particular bill was created — it is expected, not an error. If in doubt, check the Bill Code and Bill Month shown at the top of the screen before entering data.

4.2 The Employee Grid

- If this month was already saved before, the grid loads the **previously saved amounts**, not a fresh recalculation — so entering data once and saving protects that month from being changed by later master updates (e.g. a DA rate revision made

afterward).

- If this month has never been saved, amounts are calculated fresh from the current masters.
- You can manually enter **Income Tax**, **Professional Tax**, **Other Deduction**, and (when applicable) **NPS** for an employee — these manual values are preserved and won't be silently recalculated away once saved.
- **Cheque Amount** shown for each employee is always Net Salary + Income Tax + Professional Tax (never Gross).

4.3 Header Fields

Depending on your institute's bill, you may also fill in a **Bill No.**, **Bill Date**, and **NPS Schedule No.** for the bill. Make sure these are filled in before submitting — they're saved per bill/institute and will be blank on a new bill until entered.

4.4 Saving vs Submitting

- **Save Draft** stores your entries without moving the bill forward in the approval workflow. If this bill was previously **Returned** by an Auditor, saving a draft keeps it in the Returned state — it does **not** reset it — so a returned bill won't disappear from the Auditor's queue by accident.
- **Submit** is the action that actually advances the bill to the next approval stage.

4.5 Handling a Returned Bill

If an Auditor returns a bill, it will appear back in Salary Entry for you to correct (opened directly from **Returning Bills**, with the same Bill Code / Bill Month / Institute pre-filled). Make your corrections and use **Submit** (not just Save Draft) to send it back for review.

5. DA Difference (Arrears) & Increments

5.1 DA Difference

When a DA rate is revised with a retroactive effective date, use **DA Difference** to bill employees the difference for the affected months.

1. Go to **DA Difference → DA Difference Master** to set up / view the difference bill for the period.
2. Go to **DA Difference → DA Difference Entry** to work the employee-level detail.
3. The screen reads each employee's **previously saved salary** for each affected month — if a month was never saved in Salary Entry for that institute, it cannot be included in the DA Difference calculation ("no snapshot" for that month), because there's nothing to compare against.
4. **NPS on the difference** defaults automatically to 10% of the DA Difference (rounded up), but you can edit it by hand for an individual employee — once edited, your value is kept and won't be overwritten by later recalculations.
5. Save Draft / Submit works the same way as Salary Entry — amounts you see for an already-saved bill are read back exactly as saved, not recomputed on the fly.

5.2 Increments

An employee's annual increment moves them to the next Pay Matrix cell within the same level. - Increments are recorded in **Increment Master** / applied through Salary Entry, and only take effect when you **Save Draft or Submit** a bill — opening/**Get Data** never writes an increment record on its own. - A manually entered New Basic Pay for an employee overrides the Pay Matrix cell, and any further increments continue from that manual value. - The employee's underlying master record isn't changed by an increment; their current pay state for any given month is worked out from their increment history, so past months' bills remain accurate even after a later increment.

6. Approval Workflow (Salary Approval, Returning Bills, Final Salary Bill)

Every salary or DA-Difference bill for an institute moves through an approval workflow tracked per institute:

DRAFT → SUBMITTED → (VERIFIED →) APPROVED → LOCKED
 ↘ RETURNED → RESUBMITTED ↗
 ↘ REJECTED

6.1 Account Officer — Salary Approval

Go to **Salary → Salary Approval** (Account Officer / Admin only) to see bills awaiting your review, submitted by institutes. - Review the bill. - **Approve** to move it forward, or **Return** it to the institute with a reason if corrections are needed.

6.2 Auditor — Returning Bills

Go to **Salary → Returning Bills** to see the bills that have been returned to you for correction. - This queue shows any bill currently marked **Returned**, including one that was saved as a draft after being returned (a returned bill doesn't disappear from this queue just because someone clicked Save Draft on it). - Bills that have already been re-submitted or submitted are not shown here — those are back with the Account Officer. - Open a returned bill directly from this screen to make corrections in Salary Entry, then **Submit** it again.

6.3 Final Salary Bill

Go to **Salary → Final Salary Bill** to view/generate the finalized (Approved/Locked) bill for an institute and period, once it has cleared approval.

7. Reports

All reports are under the **Reports** menu and are available to every role (Admin, Account Officer, Auditor, and any custom role with report permissions).

Report	Shows
Salary Register	The full salary register for a bill/period
Cheque Register	Cheque amounts payable per employee/institute
Bank Copy	Bank-transfer format of the salary payout

Institute Wise Salary Report	Salary totals grouped by institute
Employee Wise Salary Report	Salary detail grouped by employee
Employee Pay Slip	Individual employee pay slip
Section Summary	Salary summary grouped by section
GPF Summary / Institute Wise GPF Summary	GPF deduction totals
NPS Summary / NPS Institute Wise Summary	NPS contribution totals
NPS / GPF Deduction	Combined deduction report
Income Tax & Professional Tax	Statutory deduction report
NPS Schedule Summary	NPS schedule-number-wise summary
Employee Report	General employee listing
Variation Report	Month-over-month salary variation for an institute, comparing a previous and current bill

Most report screens let you pick an Institute, a Bill/Salary period (and sometimes a comparison period for the Variation Report), then click **View / Generate** to display or export the results.

8. Troubleshooting & Tips

- **A page appears blank.** Log out and back in, or refresh. If it stays blank, it's most likely a permissions issue for your role — ask your Admin to check Role & Permission Master. Admins always have access to every page, so a blank Master screen for an Admin account should be reported as a bug.
- **"Username already exists" when creating a genuinely new user.** Double-check the username you typed — this message is a correct duplicate check, not a system fault.
- **A returned bill seems to have vanished from the Auditor queue.** It should still show under Returning Bills as long as it's Returned or was draft-saved while Returned; if it's missing, confirm someone didn't already Submit/Resubmit it (those move it back to the Account Officer's queue instead).
- **A Bill Month doesn't match the Salary Month you expected.** This can be a legitimate arrears bill — check the Bill Code shown; don't assume it's a data error before asking DP Cell.
- **DA Difference won't calculate for a month.** That month's salary was never saved in Salary Entry for that institute — save/submit the regular salary bill for that month first.

This manual describes the application's screens and workflow as currently implemented. For technical/architectural documentation (for developers), see `PROJECT_DOCUMENTATION.md`.
